Northwestern
Kellogg
School of Management

Education

Kellogg School of Management, Northwestern University, Evanston, IL 2021 – Expected 2027
Committee: Brett Gordon and Anna Tuchman (Co-Chairs), Anocha Aribarg, Ilya Morozov, Guy Aridor
Ph.D. in Quantitative Marketing
M.A. in Quantitative Marketing

University of Michigan, Ann Arbor, MI 2019 – 2021
M.A. in Applied Economics
M.S. in Industrial and Operations Engineering

Shanghai Normal University, Shanghai, China 2015 – 2019
B.A. in Finance and Economics (*summa cum laude*)

Research Interests

Substantive Marketing and Sustainability; Product Innovation; Digital Platforms
Methodological Causal Inference; Bayesian Modeling; Machine Learning

Working Papers

What Drives Sustainable Choices? Do Good, Feel Good, and Look Good, with Anocha Aribarg
Job Market Paper (Under Review)
Center for Brand Leadership Best Brand Paper Award, Haring Symposium, 2026

Do Judge a Product by Its Sustainability Label: Evidence from the Amazon Marketplace, with Sherry He
(Under Review)

Product Reformulation: A Suitable Substitute?, with Anna Tuchman and Youngeun Lee
(Manuscript in Preparation)

Selected Work in Progress

AI-Enabled Referrals for Sustainable Service Adoption: Evidence from Field Experiments

Beyond the Label: Product Signals, Package Design, and Consumer Demand, with Anocha Aribarg

Pouring Out Sustainable Innovation: Misinformation, Debunking, and Consumer Responses, with Sherry He

Non-Peer Reviewed Publications

Research: Products Labeled as Sustainable Sell Better, with Sherry He. *Harvard Business Review*, 2025

Conference Presentations

Awards, Fellowships, and Grants

Center for Brand Leadership Best Brand Paper Award, Haring Symposium	2026
Dean's Office Ph.D. Research Funding, Kellogg School of Management (\$6,825)	2025 – 2026
Graduate Fellowship, Northwestern University	2021 – 2027
Outstanding Graduate Award, Shanghai Municipal Education Commission	2019
National Scholarship, Ministry of Education of the People's Republic of China (RMB 24,000)	2016 – 2018

Teaching Experience

Retail Analytics and Pricing (MBA)	
Graduate Assistant, Professor Brett Gordon	Winter 2023–2025, Spring 2024
Graduate Assistant, Professor Anna Tuchman	Fall 2023, 2024
Marketing Financial Management (Undergrad Core)	
Teaching Assistant, Professor Lijun Xu	Spring 2019
International Economics and Marketing (Undergrad Core)	
Teaching Assistant, Professor Yawei Yao	Fall 2018

Other Research Experience

Research Assistant, Professor Fred Feinberg, University of Michigan	2020–2021
Research Assistant, Professor Derek Harmon, University of Michigan	2020–2021
Research Assistant, Professor Elizabeth Bruch, University of Michigan	2020

Selected Doctoral Coursework

Economics

Econometrics I (Charles Manski)	Microeconomics I (Eddie Dekel)
Econometrics II (Joel Horowitz)	Microeconomics III (Wojciech Olszewski)
Econometrics III (Ivan Canay)	Industrial Organization I (Gastón Illanes)
Advanced Econometrics II (Eric Auerbach)	Industrial Organization II (Vivek Bhattacharya)

Marketing

Quant Mktg: Intro Theory/Modeling (Eric Anderson, Anna Tuchman)	Quant Mktg: Statistical & Bayesian Modeling (Blakeley McShane)
Quant Mktg: Structural Modeling (Brett Gordon, Caio Waisman)	Topics in Quant Mktg (Brett Gordon, Anna Tuchman, Caio Waisman, Florian Zettelmeyer)

Computer Science

Machine Learning (Zach Wood-Doughty)

Managerial Economics & Strategy

Technology & Innovation I (Daniel Spulber)	Economic Theory I (Nabil Al-Najjar)
Technology & Innovation II (Benjamin Jones)	

Management, Organizations & Sociology

Topics in Computational Social Science (Dashun Wang)

What Drives Sustainable Choices? Do Good, Feel Good, and Look Good

with Anocha Aribarg

Job Market Paper | *Under Review* | [Available at SSRN](#)

Firms increasingly use sustainability claims and marketing campaigns to promote sustainable consumption. Designing effective messages requires understanding why consumers value sustainability, because different motives require different persuasive appeals. This paper develops an empirical framework to recover and quantify the primary latent benefits driving sustainable choices: *Do Good* (environmental impact), *Feel Good* (warm glow), and *Look Good* (social image). We design an incentive-compatible conjoint study that elicits consumers' choices and perceived benefits. We then estimate a hierarchical Bayesian choice model linking sustainability features, latent benefits, and choice, while allowing benefit importance to correlate and vary across consumers. Applied to coffee capsules, the model shows that *Feel Good* dominates for recyclable and compostable packaging, whose sustainability value depends on individuals' disposal effort, whereas *Do Good* dominates for a low-carbon footprint, whose sustainability value is achieved through supply-chain activities with little consumer involvement. *Look Good* matters little on average but becomes more important among consumers highly sensitive to social norms. A follow-up randomized experiment confirms that advertisements emphasizing consumers' relevant latent benefits raise willingness to pay more than advertisements mentioning sustainability features alone. Our framework extends to other contexts, helping firms and policymakers identify motives behind sustainable choices and design marketing strategies accordingly.

Do Judge a Product by Its Sustainability Label: Evidence from the Amazon Marketplace

with Sherry He

Under Review | [Available at SSRN](#)

Companies increasingly use sustainability labels to communicate product sustainability, yet firms face a growing variety of certifications and limited guidance on whether, why, and when these labels increase sales. We study these questions in the Amazon Marketplace through its Climate Pledge Friendly (CPF) program. Combining product-level panel data with a matched stacked difference-in-differences design, we find that adding the CPF label increases sales by approximately 7% over the following eight weeks. Mechanism tests provide little support for a salience channel operating through improved search positions, filter availability, or label density. Instead, the sales effect varies with the underlying certification and sustainability feature, supporting an information channel in which consumers respond to the information conveyed by the label. Using post-double-selection LASSO, we further identify product and certification characteristics that are associated with larger sales gains and document substantial heterogeneity across product-category-by-sustainability-feature combinations. These findings inform firms' certification decisions and platforms' presentation of sustainability information.

Product Reformulation: A Suitable Substitute?

with Anna Tuchman and Youngeun Lee

Draft available upon request

This paper investigates product reformulation – the adjustment of ingredients or composition of ingredients in existing products – in the food and beverage industries. Using comprehensive data on product ingredients, nutrition facts, and store sales, we document the prevalence of reformulation, characterize the tactics firms employ, assess the impact of reformulation on product quality and differentiation, and evaluate consumer demand for reformulated products. We find that reformulation is a widespread and persistent practice, with reformulated products accounting for 26% of volume sales across categories and over time. Firms use a diverse range of tactics, including dilution and adjusting compositional flexibility, leading to moderate shifts in nutrient density, but minimal change in the average nutritional quality within a category. We find that less healthy products tend to experience improvements in their nutritional profiles while healthier products are reformulated to be less healthy, suggesting a convergence toward average nutrient values within a category following reformulation. Finally, we find limited evidence of meaningful demand response, indicating that reformulated versions may serve as close substitutes for their originals, even when nutrient density deteriorates without corresponding price changes. Such minimal responses suggest that reformulation may modify product quality in a way that is difficult for consumers to detect.
